

LARGE MOLECULE MANUFACTURING

Recombinant protein and plasmid DNA therapeutics and critical raw materials, including for vaccine and gene therapy applications, for the global market.

Ajinomoto Bio-Pharma Services offers the capacity and quality to scale your process through clinical development and commercialization.

SCALABLE cGMP BIOLOGICS MANUFACTURING

- Protein/Plasmid DNA Production
- Recombinant proteins
- Fusion proteins
- Enzymes
- Antibodies & ab fragments
- Plasmids
- Vaccines
- Gene Therapy
- Fermentation & Product Recovery
- Purification & Formulation

- Microbial Cell Banking & Characterization
 - E. coli strains
 - Corynex® Protein Expression System
 - Pseudomonas strains
 - Client-specified strains
 - Yeast strains

⋮

- Highly Potent / ADC Purification & Conjugation

LARGE MOLECULE MANUFACTURING

cGMP MANUFACTURING CAPABILITIES

- 100 L and 1,000 L Fermenters
- Microfluidizer
- Homogenizers
- 2,000 L Single Use Mixer
- Continuous Centrifuge
- Depth and Tangential Filtration Systems
- Scalable Chromatography Systems

⋮

- Phase – Appropriate Analytical Services
